2006 Census Housing Series: Issue 15—Seniors in Collective Dwellings

INTRODUCTION

As a result of falling fertility rates, rising longevity, better health care and large cohorts of aging baby boomers, Canada's population is aging rapidly. Based on its projection scenarios, Statistics Canada projects that there will be a persistence of this demographic trend for decades to come.[1] This is expected to have major economic and social implications. One of the many challenges that come with an aging population is that of housing, because living arrangements and housing needs change as people age.

While the vast majority of Canadian seniors[2] lived in private dwellings at the time of the 2006 Census, collective dwellings were the place of residence for about 7.5% of seniors. Using 2006 Census data, this Research Highlight examines the seniors' population in collective dwellings in relation to other segments of the Canadian population living in these types of accommodations. The Highlight first describes general trends of the Canadian seniors' population and its living arrangements. It then discusses the population in collective dwellings, focusing on the characteristics of the seniors' population residing in these types of residences.

This Research Highlight will be of interest to policy makers and people working in the private and non-profit seniors' housing and related service sectors.

FINDINGS

Canada's seniors' population

There were about 4.3 million Canadians 65 years and older in 2006, accounting for 14% of the total population. Between 1996 and 2006, the seniors' population increased by 23%, from 3.5 million to 4.3 million, while the total population increased by about 10% (see Table 1). In the medium-growth scenario, Statistics Canada projects that by 2036, approximately 10 million Canadians will be 65 years and older, increasing this age group's share of the total population to 24%.[1]

The growth of the senior population between 1996 and 2006 was reflected in the population living in both private and collective dwellings. The number of seniors living in private dwellings increased by 23%, from about 3.3 million to about 4 million. The number of seniors living in collective dwellings increased by 22%, to about 324,000, driven by an increase in the 75 plus age group.

In 2006, the percentage of seniors living in collective dwellings increased with age, from 2.1% for seniors aged 65 to 74, to 13.5% for seniors aged 75 and over. This observation was also true at the time of the 1996 Census, when 14.9% of seniors aged 75 and older were residents of collective dwellings compared to 2.4% for the 65 to 74 age group.

Collective dwellings

There were about 27,915 collective dwelling institutions in Canada in 2006. About 47% of them were health care and related facilities, and 35% were "service collective dwellings" (hotels, motels and rooming houses) (see Table 2). These two types of accommodations also accounted for the highest percentages in each province and territory, with health care facilities ranging from about 10% in Yukon to 65% in Saskatchewan and service collective dwellings from about 18% in Saskatchewan to 64% in Prince Edward Island.

Population of all ages in collective dwellings

At the national level, 71% of the population of all ages in collective dwellings lived in health care facilities, compared to only 10% in services collective dwellings (see Table 3). Across provinces and territories, the percentage of the population of all ages in collective dwellings that resided in health care facilities varied from 20% in Nunavut to 83% in Newfoundland and Labrador.

About 31% of persons living in collective dwellings were younger than 55 years old, 8% were between 55 and 64 years old, 52% were 75 years and older, while 61% were 65 and older (see Table 4).

Manitoba, Alberta and the territories had higher proportions of people under 55 years than of people 65 years and older living in collective dwellings. For the territories, percentages varied from 57% in Yukon to 84% in Nunavut for the 55 years and under, compared to a range of 7% in Nunavut to 26% in Yukon for seniors.

Women's longer life expectancy is reflected among people living in collective dwellings. At the national level, women aged 75 and over accounted for 38% of the population of all ages living in collective dwellings, compared to only 14% for men over the age of 75.

Seniors in collective dwellings

Of the 324,000 seniors living in collective dwellings, about 93% were residents of health care and related facilities; 2% were in services collective dwellings (hotels, motels, rooming houses); 5% were in religious establishments, Hutterite colonies, and other types of collective dwellings; and less than 0.5% were in correctional and penal institutions, shelters and group homes (see Table 5).

Special care facilities accounted for 85% of the seniors living in collective dwellings; including 75% who were 75 years and older. In the provinces, the proportion of seniors in special care facilities varied from 78% in Newfoundland and Labrador to 89% in Ontario.

There were approximately 299,000 people of all ages living in special care facilities. Of these, 91% were 65 or older (combining males and females in Figure 1); and 81% were aged 75 or over (combining males and females). For those 75 and older in special care facilities, there were about three women for every man. Comparable observations can be made for the provinces (see Figure 2).

SUMMARY

In 2006, there were about 4.3 million seniors aged 65 and older, of whom about 324, 000 (or 7.5%) were residents of collective dwellings, while about 4 million (or 92.5%) lived in private dwellings. For those 75 and older, the percentage in collective dwellings was 13.5%. About 93% of seniors living in collective dwellings were residents of health care and related facilities, mostly special care facilities. Seniors made up 91% of the residents of special care facilities, 10 percentage points in the 65 to 74 age group and 81 percentage points who were 75 years and older. Women aged 75 and older outnumbered men in special care facilities by about 3 to 1.
